Introduction

What is nature versus nurture? To what extent do genetic inheritance and non-genetic factors contribute to one’s character? This is ... [Century, 12pt]

Materials and Methods

Five cloned cows (Japanese Black, age: 68 to 82 months) and six non-cloned cows (Japanese Black, age: 52 to 129 months) were used ... [Century, 12pt]

Results and Discussion

By bisulfite sequencing experiments, the variation in DNA methylation levels is not different between clones and non-clones ... [Century, 12pt]

Notes

- Please make “one page” A4-sized PDF file.
- This PDF file will appear on the abstract book as is. Please include all the necessary information; title, names, affiliations, and abstract text as above.
- Please delete all “red” colored and example text.
- Headings within the text are optional.
- If you have any questions to prepare abstract, please contact: wcrb2017@reproduction.jp
